

# The complete cleaner

**T**HE vacuum cleaner has become an indispensable item in most households today.

However, its use is often limited to only removing dry, surface dust and dirt. When it comes to removing spills and stains like urine, saliva, sweat and milk - simple, conventional vacuuming will not do.

However great the suction power of your existing vacuum cleaner, you will never be able to remove spills and stains on mattresses, carpets and upholstery with plain, dry vacuum cleaning.

You may even scrub the surface with detergent but it will only push the stain further into the fabric fibres.

But with STORM S1 Hydrocleaner, you can!

Now this is where STORM truly sets itself apart from all other cleaner systems in the market.

STORM's patented Fibreflow Washing System effectively washes out spots, spills and stains from mattresses, carpets, upholstered furniture and car seats with instant drying results.

The mini and maxi cleaning heads create a unique cleaning action that gently circulates water and cleaning solution through fabric fibres without wetting the backing of carpets or drenching upholstered furniture.

Dirt and impurities are loosened from within the fabric and drawn into the wash bucket.

This means there is no chance of shrinking and carpets are dry enough to walk on within 2-3 hours. You can wash your mattress in the afternoon and sleep on it by nightfall!

Use the mini head for stain removal and the maxi head for washing carpets and mattresses.

If you think that vacuuming alone gets all the dust out of your carpet and mattress, think again.

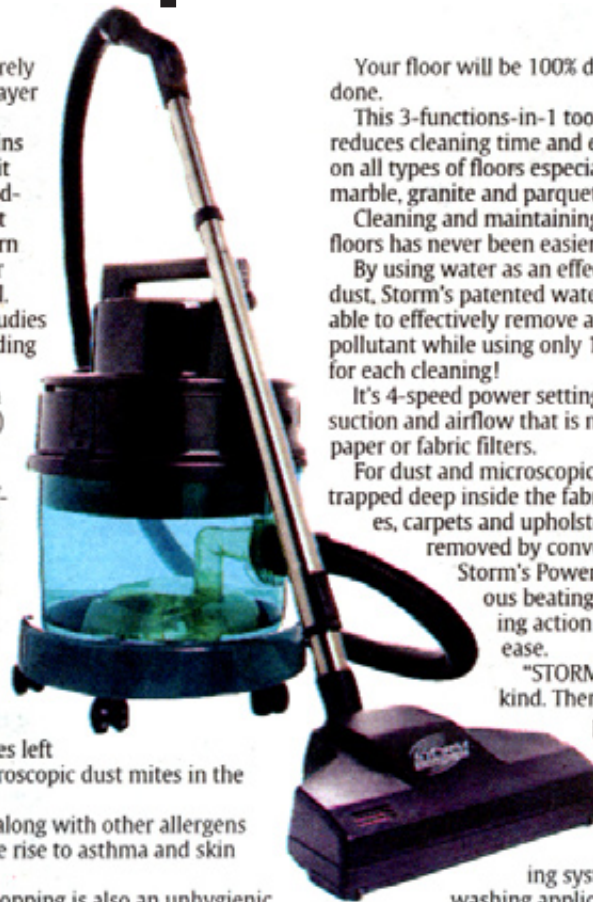

Vacuuming merely removes the top layer of dirt. The lower layer of dirt remains and as the dirt, grit and grease get trodden deeper, carpet fibres become worn out and the colour begins to look dull.

Independent studies carried out by leading test laboratory Cleaning Research International (CRI) have proven that washing carpets leaves them significantly cleaner than dry vacuuming alone.

Washing your carpets and mattresses is the most effective way to rid your carpets of the unhygienic residues left by millions of microscopic dust mites in the carpet pile.

These residues along with other allergens and pollutants give rise to asthma and skin allergies.

Conventional mopping is also an unhygienic and ineffective method of cleaning as the same dirty water is reused several times before changing. But with STORM's Automop, you are able to sweep, mop and dry floors instantly with just one tool.

Your floor will be 100% dry when you are done.

This 3-functions-in-1 tool dramatically reduces cleaning time and effort. It can be used on all types of floors especially wooden flooring, marble, granite and parquet floors.

Cleaning and maintaining water-sensitive floors has never been easier.

By using water as an effective medium to trap dust, Storm's patented water wash system is able to effectively remove any airborne dust and pollutant while using only 1.5 litres of tap water for each cleaning!

Its 4-speed power setting allows for powerful suction and airflow that is not hindered by any paper or fabric filters.

For dust and microscopic impurities that are trapped deep inside the fabric fibres of mattresses, carpets and upholstery that cannot be removed by conventional vacuuming,

Storm's Powerbrush's simultaneous beating, brushing and sucking action does the job with ease.

"STORM is truly one of a kind. There's no other complete home cleaning system that lets you vacuum, clean the air and wash as well. If your home cleaning system can't perform

washing applications then your home is not completely cleaned," said Ooi

Kah Hin, Managing Director of Visionary Solutions Sdn Bhd, the exclusive marketer of STORM in Malaysia.
